

FMLY PRODUCTION

HOW IT WORKS

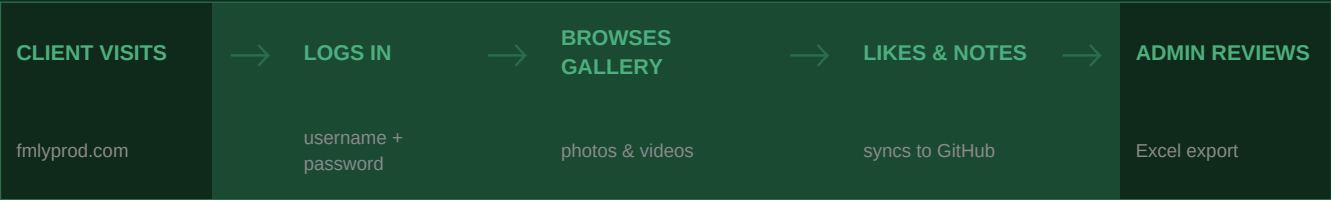

A complete guide to the platform,
storage, users & content flow.

www.fmlyprod.com

Confidential — Internal Use Only

THE BIG PICTURE

FMLY Production is a private photography platform — no third-party CMS, no subscriptions. One file runs the entire website.

GITHUB PAGES	www.fmlyprod.com	Hosts the website Auto-deploys on push	\$0
CLOUDFLARE R2	media.fmlyprod.com	All photos & videos 10 GB free tier	\$0
CF WORKER	fmly-upload.workers.dev	Secure upload auth Presigned R2 URLs	\$0
GITHUB REPO	fmlyprod/fmlyprod	clients.json / manifests likes-log.json	\$0

ADMIN PANEL — FOUR TABS

Log in as admin at www.fmlyprod.com to access all management tools.

TAB	WHAT YOU CAN DO	KEY ACTIONS
GALLERY	Create and manage projects (Bakery, Dunkin...). Upload photos and videos to a project.	New Project · Upload Photos & Videos · Remove Project
PHOTOS	Browse any project's folder structure. Delete individual photos or entire folders.	Select photos to delete · Delete Folder button in breadcrumb bar
USERS	Create client accounts. Set folder-level access per user. Upload Shoot Docs (PDFs).	New User · Set allowed folders · Upload PDFs per user
LIKES LOG	View liked photos per session, read notes, spot coincidences across users, export to Excel.	Download ZIP · Export Excel (URL / Filename / User / Note) · Coincidences

WHAT CLIENTS SEE

Clients only see what the admin has granted them access to — per project and per folder.

01	LOGIN	Username + password assigned by admin. Access restricted to their project and permitted folders.
02	BROWSE	Photos and videos in folders by category. Folder list filtered to what they're allowed to see.
03	LIKE ♥	Tap the heart on any photo. Liked photos go to a LIKED tab. Syncs to GitHub every few seconds.
04	NOTE ✎	Add a text note to any photo via the pencil icon. Notes sync alongside likes. Visible in admin's Likes Log.
05	DOWNLOAD	Download individual photos or an entire folder as a ZIP archive.
06	SHOOT DOCS	If the admin uploaded PDFs for this user, a SHOOT DOCS button appears. Preview or download anytime.

WHERE FILES LIVE & HOW UPLOADS WORK

STORAGE

GitHub Repo — Legacy photos

Older photos served via raw.githubusercontent.com. Subject to GitHub's 1 GB repo limit.

Cloudflare R2 — All new uploads

Served via media.fmlyprod.com CDN. No file size limit. Videos supported. Free tier: 10 GB.

manifest.json = source of truth

Lists every photo URL in every folder. Gallery reads this file. Admin 'delete' removes URL from manifest — underlying file stays on storage.

UPLOAD FLOW

Auth	Browser sends admin password to Cloudflare Worker
Token	Worker returns a short-lived JWT
Presign	Browser requests a presigned R2 URL per file
Upload	File goes directly from browser to R2
Manifest	Success URL added to manifest.json on GitHub

KEY DATA FILES IN THE REPO

All configuration and content metadata lives in three files in the GitHub repo.

FILE	LOCATION	PURPOSE
clients.json	Root of repo	Master config: all users, passwords, projects, folder permissions, shoot docs. Also stores encoded GitHub write token (gt) and upload password (up). Auto-loaded on page init.
images/{project}/manifest.json	e.g. images/bakery/manifest.json	Photo index per project. Format: { CATEGORY: { FOLDER: ['url'...] } }. Admin deletes update this. Adding folders creates new keys here.
likes-log.json	Root of repo	One entry per user. Stores: username, project, timestamp, liked photo URLs, and a notes map (url → note text). Re-written every time a user likes or adds a note.
upload-worker.js	LOCAL ONLY — never commit to GitHub	Cloudflare Worker source with plain-text credentials. In .gitignore. Must be deployed manually via Cloudflare Workers dashboard. Rotate passwords there.

SECURITY, TOKENS & RUNNING COSTS

TOKEN / CREDENTIAL	HOW IT'S PROTECTED	SERVICE	PLAN	COST
GitHub Write Token	XOR-encoded as 'gt' in clients.json. Loaded on init. Used for all GitHub writes. Never in source code.	GitHub Pages	Free public repo	\$0/mo
Upload Password	XOR-encoded as 'up' in clients.json. Authenticates with Worker. R2 keys never reach the browser.	Cloudflare R2	10 GB + 10M reads free	\$0/mo
Client Passwords	Plain text in clients.json. Low-sensitivity gallery access codes — not personal account data.	CF Workers	100K req/day free	\$0/mo
Worker Source	upload-worker.js has all credentials. In .gitignore. Deploy via Cloudflare dashboard only.	Domain	fmlyprod.com	~\$12/yr
